EXECUTIVE SUMMARY

This report aims at investigating the following questions on the base of the database mtcars:

1. Is an automatic or manual transmission better for MPG (miles per gallons)

2. Quantify the MPG difference between automatic and manual transmissions

The database contains 32 car models of which 19 have automatic transmission and 13 have manual.

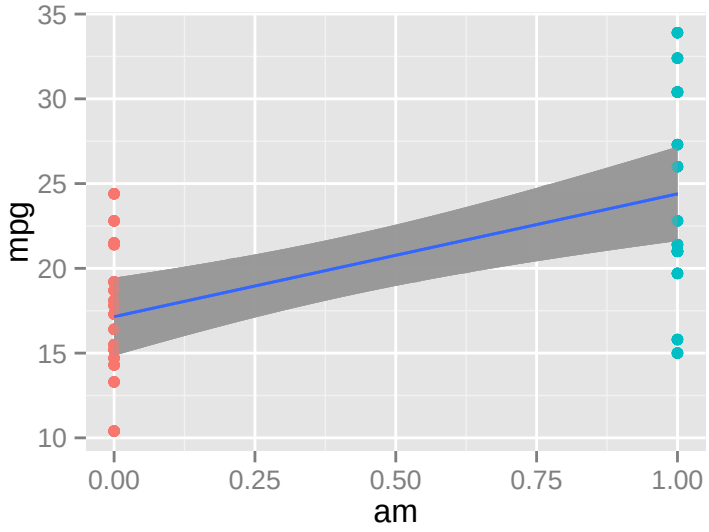
```
##                    mpg cyl disp  hp drat    wt  qsec vs am gear carb
## Mazda RX4         21.0   6  160 110 3.90 2.620 16.46  0  1    4    4
## Mazda RX4 Wag     21.0   6  160 110 3.90 2.875 17.02  0  1    4    4
## Datsun 710        22.8   4  108  93 3.85 2.320 18.61  1  1    4    1
## Hornet 4 Drive    21.4   6  258 110 3.08 3.215 19.44  1  0    3    1
## Hornet Sportabout 18.7   8  360 175 3.15 3.440 17.02  0  0    3    2
## Valiant           18.1   6  225 105 2.76 3.460 20.22  1  0    3    1
```

First we check the null hypothesis that manual and automatic transmissions cars are from the same population (the variable "am" is 0 for automatic transmission and 1 for manual.). For the sake of this projects we assume "mpg" to have a normal distribution, although it looks a little skewed.

A simple t-test confirm that the two transmissions are not from the same population as the interval does not contain 0 and the p-value 0.0013736 is sufficiently low.

```
## [1] -11.280194  -3.209684
## attr(,"conf.level")
## [1] 0.95
```

We consider a linear model with "am" as a predictor and "mpg" as a response.



```
##
## Call:
## lm(formula = mpg ~ am, data = mtcars)
##
```

```
## Residuals:
##     Min      1Q  Median      3Q     Max
## -9.3923 -3.0923 -0.2974  3.2439  9.5077
##
## Coefficients:
##             Estimate Std. Error t value Pr(>|t|)
## (Intercept)   17.147      1.125  15.247 1.13e-15 ***

## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1
##
## Residual standard error: 4.902 on 30 degrees of freedom
## Multiple R-squared:  0.3598, Adjusted R-squared:  0.3385
## F-statistic: 16.86 on 1 and 30 DF,  p-value: 0.000285
```

The relatevly high F-statistic and the very low p-value confirm that there might be a correlation, but if we look at how well the model fit, R-squared 0.36 is very low (1 being best fit, 0 being no fit at all). This, together with a Residual Standard Error (RSE) of 4.822, suggests that the model is not very accurate and that there might be other model to better explain the correlation. We look therefore to other variables that might be confounder.

```
##
## Call:
## lm(formula = mpg ~ ., data = mtcars)

##
## Residual standard error: 2.65 on 21 degrees of freedom
## Multiple R-squared:  0.869,  Adjusted R-squared:  0.8066
## F-statistic: 13.93 on 10 and 21 DF,  p-value: 3.793e-07
```

The only variable with a significant impact and a low p-value is “wt”, the weight.

```
##
## Call:
```

```
## lm(formula = mpg ~ am + wt, data = mtcars)
##
## Residuals:
##     Min      1Q  Median      3Q     Max
## -4.5295 -2.3619 -0.1317  1.4025  6.8782
##
## Coefficients:

## am          -0.02362    1.54565  -0.015    0.988
## wt          -5.35281    0.78824  -6.791 1.87e-07 ***
## ---
## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1
##
## Residual standard error: 3.098 on 29 degrees of freedom
## Multiple R-squared:  0.7528, Adjusted R-squared:  0.7358
## F-statistic: 44.17 on 2 and 29 DF,  p-value: 1.579e-09
```

Once that the wt is factored in, the effect of automatic/manual gear is very small (0 increase in performance for the manual gear) and with no statistical significance (p-value of 0.9879146).
